Job Title

Company Name and description

Operations Support Technician

Connectria Hosting St. Louis, MO

Posted: ongoing

About the Job

Want to be rewarded & appreciated for what you do?

We are ranked as one of the Best Places To Work by the St.Louis Post-Dispatch & St.Louis Magazine!

This is a great opportunity with one of the world's fastest growing server hosting companies! Read on...

About Us:

Connectria Hosting provides award-winning Cloud Computing and Managed Hosting from our world-class data centers in St. Louis, Philadelphia and Dallas. Connectria has been listed among the Inc. 500/5000 Fastest Growing Companies for the past 5 years, and one of the Best Places To Work in St. Louis for the past 3 years. Connectria has nearly 1,000 customers in 30+ countries located throughout the world.

Position Description: Operations Support Technician

Position Profile:

Due to continued growth in our custom hosting division we are expanding our Operations Support Team.

We are 24/7/365 organization and the positions being offered required three month rotating shift (off hours) work and holiday work. (can NOT work around school schedules)

This is an entry level job so on the job training is provided, but experience and/or knowledge in the IT field is a bonus. We also like to promote from within, so these positions may eventually lead to opportunities elsewhere within our organization.

Some of the duties include: monitoring of enterprise networks, building and troubleshooting server hardware, as well as, communicating with customers and engineers.

Required Skills:

- Have basic understanding of client server architecture.
- Have basic understanding of TCP/IP and networking concepts
- Have strong organizational skills with ability to multitask.
- Strong communication skills over phone, e-mail and documentation
- Be able to thrive in a dynamic environment & work independently
- Be able to pass a background check to include drug screening
- Be able to work in the St. Louis area
- Fit within our mandatory No Jerks Allowed® company policy

Desired Skills:

- Experience in IBM AS/400 / iSeries / System i technologies
- An Associate's degree or equivalent knowledge.
- Network Operation Center experience preferred.
- Technical certifications preferred

What's In It For You?

The opportunity to work with one of the fastest growing companies in the country, and a great place to work! Connectria offers the comfortable offices and generous benefits you'd expect from a large company, with the relaxed family oriented atmosphere of a small company.

We offer an excellent compensation plan, generous benefits with 100% paid employee medical and dental insurance, paid vacations, 401(k), disability insurance, on-site fitness center, St. Louis Cardinals & St. Louis Blues tickets for our employees, and much more. In fact, there are too many added incentives to list!

So if you're interested in a great opportunity with one of the fastest growing technology companies and best places to work in St. Louis, we'd love to talk with you!

Connectria is an Equal Opportunity Employer.

How to Apply:

Please send your resume to the following:

[Software Developer](#)

[Profound Logic Software](#)

Dayton, OH

Job ID:

Posted: Ongoing

If you love the IBM i and want to have a direct influence on the future of this platform, this opportunity is for you. We are a small but very successful software company that brings modern development tools and legacy modernization software to the IBM i system and the RPG language. Our team is passionate about creating the best user interface technology possible for IBM i. In this position, you will play a critical role in refining our solutions and servicing our customers. We are looking for a versatile professional that enjoys computer programming as well as communicating with end-users and other developers.

Your responsibilities may include:

- Building modern IBM i applications and modernizing existing applications for customers as part of our services team
- Illustrating the power of our modernization solution by quickly delivering proof of concept applications written in RPGLE with a modern browser or mobile interface
- Troubleshooting our modernization technology on customers' systems and assisting customers with technical support
- Training customers
- Creating sample applications and demos to showcase and teach our modernization solutions
- Writing documentation

Requirements:

- You are a well-rounded developer and have good overall understanding of IT, business applications, relational databases, green-screen development, and web development
- You have a knack for working with users to gather requirements and transforming these requirements into working solutions
- You are incredibly skillful with the IBM i operating system and the RPG programming language
- You have kept up to date with all advancements in RPG
- You write all new code using the Free Format syntax of RPG, but have a good understanding of Fixed Format as well
- You are versed with embedded SQL, CL, and other concepts surrounding RPG programming
- You understand ILE, subprocedures, modules, service programs, and binding directories
- You possess fundamental knowledge of web browser applications, web services, http servers, HTML, CSS, and JavaScript. In-depth knowledge of HTML5/JavaScript/JSON is not required, but would be a major plus.
- You are eager to learn new languages and broaden your skills

Key Benefits:

- You will be a part of a highly talented, motivated, and passionate team
- You will help define the future of browser-based application development
- You will assist customers from all over the world in creating critical business applications
- You will receive competitive pay and company benefits
- You will have direct influence over the company's success and receive bonuses based on company performance

This position offers a competitive salary, benefits, and bonuses. Contact careers@profoundlogic.com to apply.

Job Title	Company Name and description
-----------	------------------------------

[Global Account Specialist](#)
Job ID: IRC181136

[WESCO International](#)

Little Rock, AR

Posted: December 20, 2016

The Global Accounts Specialist I manages Accounts Receivable of Global Customers across WESCO's multiple operating groups, to achieve goals established by Financial Services leadership. Under direct supervision, the Global Account Specialist I is responsible for maintaining professional relationships with vital internal & external contacts, including Branch Management and Global Account Managers. The scope of responsibility may be two to four of WESCO's Global Customers, with an average AR portfolio value of \$3 to \$10 million, spanning multiple branches. This position also provides administrative support to the Financial Services team.

Detailed Description

- Collects the Accounts Receivable in accordance with terms of global contract and department objectives.
- Maintains and updates all necessary standard process documentation for each key account.
- Proactively reconciles WESCO's outstanding A/R balances (200 to 2,000 invoices per account) on a weekly basis to the documentation provided by the customer's Accounts Payable department.
- Participates in periodic reviews with FS Supervisor of assigned A/R portfolio, assigned goals and objectives, and take necessary action to improve performance
- Conducts regular review of party aging to ensure all individual accounts are loaded with correct payment terms, billing method and collector assignment.
- Evaluates collectability of unearned cash discounts, finance charges, small dollar invoices, etc. and submits items to Supervisor, who will evaluate and write-off of uncollectable amounts within level of authority.
- Prepares required reports on a timely basis for sales and branch visibility, in order to monitor performance (e.g., payment trends, disputes and invoices to accrue, etc.)
- Monitors billing activity on a weekly basis to confirm compliance or obtain action to remediate non-compliance.
- Makes recommendations for the extension of credit for customers (e.g., branch level accounts for Global customer) for review by FS Supervisor; reviews orders on credit suspension so as to not delay shipments; makes decisions to release orders on credit hold within specified limits, or escalate requests outside of limits to supervisor.
- Provides administrative support for the FS Supervisor and team, including but not limited to: manual customer portal work, adhoc reporting, routine tasks for top Global Accounts, etc.

EXPERIENCE:

- 1 year Accounts Receivable, Accounting, Finance, Banking, Supply Chain and Business related experience
- Operating Systems - Oracle ERP (Advanced Collections), AS400, Ariba, SAP, 2 years experience preferred

EDUCATION:

- Associates' Degree required, Bachelors' Degree preferred
- NACM or similar certification preferred

Duties and Responsibilities: Under direct supervision and guidance performs all Level 1 duties:

- Creating databases, installing and administering Oracle database engine and Oracle Application Server, Apache, Tomcat, WebLogic and WebSphere web server software and upgrades on IBM AIX, Linux and Windows operating systems. Applying database and web server patches as necessary. - Creating and maintaining configuration files.
- Configuring JAVA and PHP components to enable form and content delivery.
- Installing SSL and certificate authentication on web servers and databases using Advanced Security. Implementing access security, including encryption.
- Deploying ear and war files for application updates and upgrades.
- Configuring databases and web servers to support application software while keeping databases and web servers compliant with defined standards.
- Monitoring the performance of UNIX, Linux and Windows based Oracle and SQL Server database engines.
- Implementing and executing database backup and recovery methodologies.
- Performing routine maintenance to ensure databases and web services are accessible and data is accurate.
- Creating and maintaining database administration scripts using UNIX shell and Standard Query Language (SQL).
- Writing and maintaining system documentation according to established standards to facilitate ongoing support and maintenance.
- Flexibility to work on multiple projects concurrently and consistently meet deadlines.
- Ensure/implement the rigorous application of Information Security/Information Assurance policies, principles, and practices in the delivery of Systems, Applications and/or Services (Hardware & Software). Applying Security Technical Implementation Guide (STIG) and Payment Card Industry (PCI) requirements to Oracle and SQL Server databases and web servers.

And the following Level 2 duties:

- Creating database partitions.
- Administration of other databases, such as SQL Server and Netezza as required.
- Implementing and testing high availability and disaster recovery strategies.
- Providing technical support for crashes or failures by recovering database or web services and/or restoring data as necessary. Acquire knowledge of Oracle Data Guard and RMAN recovery technologies.
- Providing after hours support for databases and web servers as required for upgrades, roll outs and resolution of production issues.
- Perform other duties as assigned.

GENERAL EXPERIENCE: Three years of experience in administrative, technical or investigative work which demonstrated the ability and aptitudes required to perform technical, managerial or analytical work involving management information systems. Demonstrates solid analytical and problem solving skills. Exhibits effective written and oral communication skills. Possesses strong interpersonal and critical thinking skills, and has the ability

to work independently or within the team.

(OR) **SUBSTITUTION OF EDUCATION FOR EXPERIENCE:** One year of related academic study above the high school level may be substituted for 9 months of experience up to a maximum of a 4 year bachelor's degree in software engineering or business information systems discipline for 3 years of general experience.

AND SPECIALIZED EXPERIENCE: Minimum of two years progressive experience in the following:

- Experience in a Technical Support Group with duties that included working with Database and/or Web server Software, including writing and using SQL or batch scripts.
- Monitoring, optimizing and administration of Databases and Web Servers or applications that utilize databases and web servers. Knowledge of upgrade methodologies.
- Backup and Recovery; high availability and failover technologies.

Job Title**Company Name and description****Security Analyst**[Systems & Methods Inc.](#)

Carrollton, GA

Job ID:

Posted: June 22, 2017

The Information Security Analyst will be responsible for assessing and analyzing threats, identifying vulnerabilities and recommending appropriate actions to reduce security risks to SMI's computer systems, networks and data. Work with IT and business operations to help create, document, implement, and manage policies, procedures, and practices that ensure SMI's security goals are met. Duties will include conducting vulnerability assessments and security audits, assisting with information security risk assessments, planning and implementing mitigations to security risks, and participating in the design of SMI's information security architecture, manage access control, conduct physical security reviews, and operate video surveillance systems.

ESSENTIAL ROLES AND RESPONSIBILITIES:

- Performs vulnerability scanning for network devices, applications and databases in order to determine if these assets have any vulnerabilities to potential internal or external threats.
- Analyzes and assesses security incidents that occur and escalates incidents by following incident plan.
- Assesses potential risks and vulnerabilities in the network by establishing status quo for the networks and recognizing any deviations in order to provide actionable recommendations in the event of malicious activity.
- Performs risk and security assessments of applications, databases, and servers and supports networking technologies, such as routers, switches, access points, in order to determine if these assets have any vulnerabilities to potential internal or external threats.
- Work with IT and application development to solve information security system problems and issues in a timely and accurate manner.
- Follows Information Security process, policies and procedures congruent with standards and industry best practices.
- Monitors activities and events in SMI's Technology environment to ensure that anomalous behavior is detected, identified, classified and acted upon where appropriate.
- Performs application scanning to ensure that code releases are secure.
- Develops corrective action and remediation plans when issues are identified in order to mitigate the risk of exploitation and assists with execution.
- Performs reviews and assessments of security controls before hardware/software is migrated to production.
- Performs other duties as assigned.

REQUIRED JOB QUALIFICATIONS:**KNOWLEDGE:**

- Some knowledge of Unix (AIX and Linux) platforms.
- Practical knowledge of firewalls and intrusion detection systems.
- Knowledge of Windows server platforms.
- Knowledge of HyperV and VM server platforms.
- Knowledgeable about security issues, vulnerabilities, exploits, regulatory and legal changes, and security standards that may impact information security.
- Solid working knowledge and understanding of multiple operating systems and commands, as well as an understanding of IT security and network best practices and software/hardware solutions.
- Knowledge of business, application, information and enterprise architecture responsibilities, principles and standards.
- Knowledge of database structures and queries.

Qualifications

Experience

Required

2-5 years: REQUIRED TRAINING AND EDUCATION: Bachelors degree in Cyber Security, Computer Science, Network Security Engineering or related major or equivalent work experience. COMP-TIA Security+ DESIRED TRAINING AND EDUCATION: CISSP and CEH.

[Apply online](#)[Return to job postings](#)

Job Title**Company Name and description****IT Operations Monitoring Analyst**Costco

Issaquah, WA

Job ID: 1958

Posted: September 21, 2017

This position is responsible for monitoring and assessing potential issues relating to critical IT applications, systems and devices. The IT Operations Monitoring Analyst will monitor all incoming alerts using various tools and perform actions based on predefined instructions. This position includes performing 1st and 2nd level troubleshooting, manual alert correlation, and resolving issues as required.

The successful candidate must understand how different types of Costco systems integrate together and be able to pinpoint where the actual issue is occurring. The IT Operations Monitoring Analyst must also be able to determine which issues are false positives and document/work with other teams to get these types of alerts suppressed.

Tasks and responsibilities

- Participates in the ongoing process of investigating, troubleshooting, and providing resolution to technical issues in a 24x7x365 environment.
- Quickly develop a comprehensive understanding of the applications and infrastructure within the eCommerce environment and how they impact employees or members.
- Stay informed of production changes that could affect functionality and alerting.
- Ability to coordinate across teams, working closely with peers to ensure the appropriate focus and sense of urgency is applied to all issues.
- Accurately troubleshoot, reproduce and document issues and other pertinent information in Incident or Problem tickets.
- Contact Costco warehouses, depots and other buildings in order to troubleshoot power outages and device issues.
- Create and maintain knowledge base article content.
- Document all problems & issues encountered during the shift and prepare shift turnover document.
- Handle incident queue and perform various tasks as assigned.
- Handle ad hoc requests and take on new procedures as required.
- Create and maintain team automation and misc. scripts.
- Assists in other areas of the department and company as necessary.

Required skills, abilities, and certifications

- Superior written and oral communications, phone etiquette and customer service skills.
- Ability to work a variety of different shifts, including days, nights, weekends and holidays to support a 24X7X365 environment. Shifts may fluctuate to meet business and staffing needs.
- Advanced skills in troubleshooting and analysis network, applications, systems and device issues.
- Ability to work independently in an intense and dynamic work environment as a team player is essential. Strong desire to share knowledge with others.
- 1+ Years experience working on an operations style team (NOC, SOC, etc,) and troubleshooting networking, service desk, operations center and/or supporting large eCommerce environments.
- Outstanding attention to detail, accuracy and quality of work; able to multitask in a fast-paced environment.
- 2-3 Years experience with ITIL processes including: Incident, Problem, Change, Knowledge and Event Management.
- Process-oriented; understands the organizational benefits of processes and the need for compliance.
- Able to communicate technical jargon to those that are not technical in a way that is understandable.

- Suggest or implement improvements to team processes and procedures.
- Mentor or train coworkers on new procedures.
- When working on projects, identify and track project issues and dependencies, ensure follow-through and appropriate actions are taken to complete project on time.

Recommended skills, abilities, and certifications

- Knowledge of scripting languages (Javascript, Google Apps, HTTP).
- Degree in Computer Science (or a related technical field) or equivalent relevant work experience.
- Experience with AIX, Windows, Linux, HTTP, web services, networking, Java-based applications and eCommerce platforms.
- Basic understanding of the following monitoring: Application health, system availability, latency, performance and end-to-end monitoring.
- Previous experience monitoring and troubleshooting critical systems.
- Working knowledge of supportive software including: Dynatrace, Tivoli, HP BSM, SiteScope, vSphere, FireEye, McAfee EPO, SCOM, NNM, SPLUNK, ServiceNow.
- Project Management experience (Waterfall and SCRUM/Agile).
- ITIL Foundations Certification preferred.

Job Title**Company Name and description****Hadoop Administrator****Costco**

Issaquah, WA

Job ID: 2061

Posted: October 24, 2017

This position is responsible for the support, design, maintenance, configuration and monitoring of Costco's Hadoop (i.e. Enterprise Data Hub - EDH) environment that spans multiple technology layers (i.e. Hardware, OS, Database, Application, Security, etc.). This position requires a sharp, hard-working individual who is ready to pitch in and do whatever it takes for the team to successfully stand up, roll out and support our growing hadoop environment. Along with the technical work, there will be a need to establish successful processes and documentation. This individual will participate in administration of the hadoop environment, integration of external tools/software as well as all strategic and tactical planning of the hadoop environment required to meet Costco-specific business needs. The individual filling this role will also be expected to deliver excellent customer service and to interact in a highly effective manner with other team members and management. Costco is looking for a creative individual who can effectively manage projects and multiple tasks to meet business objectives.

Tasks and responsibilities

- Partners with Infrastructure to identify server hardware, software and configurations necessary for optimally running big data workloads (i.e. Spark, Hive, Impala, etc.)
- Plans and executes major platform software and operating system upgrades and maintenance across physical and virtualized environments.
- Work with project teams to integrate Hadoop access points.
- Strong focus on design, build, deployment, security, system hardening and securing services.
- Designs and implements a toolset that simplifies provisioning and support of a large cluster environment.
- Maintains current knowledge of industry trends and standards in a "Big Data" space/ecosystem.
- Creates and maintains detailed up-to-date technical documentation.
- Proactively manages hadoop system resources to assure maximum system performance and appropriate additional capacity for peak periods and growth.
- Reviews performance stats and query execution/explain plans, and recommends changes for tuning Hive/Impala queries.
- Recommends security management best practices including the ongoing promotion of awareness on current threats, auditing of server logs and other security management processes, as well as following established security standards.
- Provides support to the user community using incident and problem management tools, email, and voicemail.
- Periodic off-hours work required including weekends and holidays. Must be able to provide 24 by 7 on-call support as necessary.
- Assists in other areas of the department and company as necessary.

Required skills, abilities, and certifications

- Understanding of Hadoop and distributed computing.
- Understanding of Hadoop components (i.e. HDFS, YARN, Zookeeper, Sqoop, Hive, Impala, Hue, Sentry, Spark, Kafka, flume, etc.)
- Minimum of 2 years experience supporting products running on AIX, Linux or other UNIX variants.
- Experience with supporting production JVMs.
- Knowledge of Relational Databases (DB2, Oracle, SQL Server, DB2 for iSeries, MySQL, Postgres, MariaDB).
- Configuration Management experience (puppet preferred).

- Version control experience (Unix, git, git preferred).
- Proficient with operating system utilities as well as server monitoring and diagnostic tools to troubleshoot server software and network issues.
- Deep knowledge of associated industry protocol standards such as: LDAP, DNS, TCP/IP, etc.
- Understanding of Enterprise level services - Active Directory, PKI Infrastructure (Venafi).
- Understanding of Kerberos, cross-realm authentication and Kerberized services.
- Security experience including SSL certificates, TLS, hardening, PEN tests, etc.
- Understanding of message based architecture.
- Flexibility is a non-negotiable skill that the ideal candidate must have.

Recommended skills, abilities, and certifications

- Experience with Systems Management and Administration (applying fixes, loading the OS, creating Gold images, resolving system issues, working with vendors to resolve issues, etc.)
- Experience with VMWare (vSphere), virtualized environments and/or cloud providers such as Microsoft Azure, AWS, etc.
- Experience with Tivoli Storage Management and/or Commvault.
- Experience in System/Database Backup and Recovery.
- B.S. degree in Computer Science or equivalent formal training and experience.

[Operations Support](#)

[Precoat Metals](#)

Granite City, IL

Job ID:

Posted: November 20, 2017

We currently are looking for Operations Support personnel for our Granite City facility. The selected individuals will work rotating shifts. His role is the designated assistant for the preparation of materials for pre and post production processes, as well as routine maintenance of line equipment, buildings and grounds. They are called upon to assist with, and may be assigned work in, any area of the plant, including coating lines, slitting, shipping, receiving, paint vault, and packaging.

Responsibilities:

- Retrieves and transports bare coils and maintains flow of metal to lines by safely operating cranes, fork lifts, and upenders without damaging material or equipment
- Inspects fork lift prior to operating and reports problems to maintenance
- Weighs bare and coated coils
- Trims, packages and bands finished coils according to customer specifications using proper skids, bands, pads, and wrapping materials
- Identifies coils by applying correct tags
- Inspects coils and identifies and reports defects
- Inspects crane cables, hoists, hooks, and chains and reports problems to maintenance
- Reads and interprets production schedules
- Accurately identifies proper skid and package specified on schedules
- Uses various hand tools to perform tasks such as banding, cleaning floors, etc.
- Operates core cutting equipment
- Verifies core length, aligns core and places core onto arbor
- Operates manual or electric shears to trim steel coils
- Inputs and retrieves information from the AS/400 main frame
- Reads and accurately records coil weights, order numbers, etc.
- Measures OD of coils using a calibrated rule
- Maintains clean and organized work area according to 5S standards
- Loads or unloads received or shipped coils onto or off of trucks
- Places bare or coated coils in proper storage locations
- Transports drums of paints and solvents to and from coating rooms and paint vault without damaging material
- Assists line operators with stitching coil strips together

Requirements:

- High school level reading and writing, visual acuity to read labels, meters, gauges, documents and instructions
- Ability to work in an industrial or warehouse environment with fork lifts, cranes, etc.
- Ability to safely operate small manual and electric hand tools
- Available to work up to 12 hours per day that could include weekends and holidays
- Ability to work in a non climate controlled environment

[UNIX / AIX Administrator](#)

[Jack Henry](#)

San Diego, CA

Job ID:

Posted: December 12, 2017

This Vendor Support role will be providing assistance to Credit Unions running our proprietary software. The multi-faceted support role will include troubleshooting and assisting customers while acting as their system administrator as well as testing, debugging, and editing of small custom PL/1 programs.

Extensive training will be provided to learn our intricate core solution and custom database. The position will primarily work weekday daytime hours and require joining a 24-hour rotation upon completing training.

MINIMUM QUALIFICATIONS

- 2+ years of supporting, maintaining, and system administration of AIX(Linux/Unix) Servers.
- 2+ years of programming or support programming background.

PREFERRED QUALIFICATIONS

- Bachelor's degree.
- Financial services background.
- PL/1 programing knowledge.

ESSENTIAL FUNCTIONS

- Learn the Episys database and its capabilities in depth.
- Assist in improving custom programs for our clients.
- Test and debug programs to ensure quality for our clients.
- Develops conversion and system implementation plans; implements newly created code and fixes into existing software.
- Provides programming support for various interfaces.
- Interact directly with our clients on a regular basis and keep them informed of all enhancements, troubleshooting, and fixes.
- Assist our clients as a system administrator.
- May complete project bids and/or work effort estimates.
- Assist other co-workers and contribute to our documentation; may include defining the system and functional requirements of the product
- Devises block diagrams, logic procedures and prepares flowcharting.

[Systems Engineer](#)
Job ID: 646939

[Leidos](#) Atlantic City, NJ

Posted: December 14, 2017

Leidos is seeking an **entry level System Engineer** who will be a member of a dynamic team working on the Federal Aviation Administration's **En-Route Automation Modernization (ERAM)** technology, which is the heart of the Next Generation Air Transportation System and the pulse of the National Airspace System helping to advance our transition from a ground-based system of air traffic control to a satellite-based system of air traffic management.

The position is within the ESSC/ERIDS Support Department for development and maintenance of the ERIDS and ESSC Systems.

The department's mission is to provide system engineering, software development, maintenance, test, user, and system support on the behalf of the FAA.

Responsibilities:

Working both as a member of a team and independently the successful candidate will:

- Modernize the ERIDS and ESSC development environment and infrastructure.
- Provide the engineering expertise to operate in a Leidos and FAA controlled development environment.
- Work with Leidos and FAA personnel to support the operations of the 20 ARTCCs.
- Be able to support local and remote customer's System support needs.
- Work with other Leidos organizations to maintain and enhance existing systems.
- Provide the support needed for system engineering and software development functional organizations.
- Articulate user needs and requirements and transform into high level designs
- To develop and implement system test and verification procedures.
- Tasks include working with FAA organizations to maintain compliance with security standards and compliance directives.
- The individual must be able to demonstrate the ability to balance user and functional requirements in an ever changing environment.
- The individual must also be able to perform system verification and validation activities on FAA programs, supporting the system developers and test personnel.

Qualifications:

- Bachelor's degree from an accredited college in a related discipline.
- Ability to apply System Engineering principles/process
- Knowledge of the Systems Engineering lifecycle.
- Ability to develop, document, and verify A/B Level requirements
- Ability to develop and document overall System Level design, function, and performance criteria
- Ability to develop prototypes for suggested/recommended solutions
- Ability to debug and correct system level problems and issues.
- Experience in use of the UNIX and Linux operating systems.

Desired Skills:

- FAA air traffic domain and program knowledge.
- UNIX/Solaris/AIX knowledge.
- Windows and Linux server knowledge and skills.
- Windows/Linux network skills

[Network Field Engineer](#)

[Jack Henry](#)

San Diego, CA

Job ID:

Posted: January 10, 2018

As a Network & Hardware Services (NHS) engineer you will play an integral part in the success of the Symitar brand - a Jack Henry & Associates company - by providing a stable hardware platform to run the industry's leading credit union core database software. You will install and configure new servers, upgrade existing servers and provide routine support to ensure peak operating performance. You will use the latest tools and techniques to provide analysis and consultation to customers, identifying improvements and resolutions to complex server, peripheral, and network problems.

We are seeking a self-driven individual who has the capacity to make a difference by helping others and craves the challenges of cutting-edge technology working on high-value projects. This person will join a strong and welcoming team of engineers who love what they do and have fun doing it

MINIMUM QUALIFICATIONS

- 2 years of experience in a Network Administration or Field Engineer role.
- Experience with LAN and WAN networks.
- Must be able to travel 30-40% after initial six months of employment
- Must be able to work on-call every six weeks.

PREFERRED QUALIFICATIONS

- Comptia Network + or A+ certifications
- AIX administration experience
- Active Directory experience is a plus.
- Credit Union or Banking Industry experience
- IBM or NetApp SAN experience
- VMware experience
- VMware Certified Administrator – Data Center Virtualization
- Bachelor's degree with an MIS emphasis

ESSENTIAL FUNCTIONS

- Install network operating system software and Episys core application software on new or existing server class hardware
- Install peripherals and communication equipment required for implementations including tape drives, terminal servers and switches
- Create print queues and configuration files on core servers
- Training of clients on basic operations of hardware solution
- Perform client migrations; transfer data from the current system environment to the new one.
- Analyze networks using tools such as ping, traceroute, nslookup, and arp to determine potential issues and make suggestions for recommended changes.
- Provide phone support to existing customers; adequate prioritization, documentation and management of case queue
- Resolve more than 50% of cases with no assistance while following JHA jSource Standards.
- Follow standard operating procedures for field projects. Prepare a "statement of work" for upcoming installations, migrations or other on-site work for clients. Deliver timely communication of status of work appropriate for management and client; correspond with customer and other divisions within the company to insure all customer concerns and issues are resolved within accepted timeframes.
- Participate in "on-call" rotation as dictated by department management; answer client calls after regular business hours and work to resolution by leveraging personal knowledge or other NHS resources as needed.
- Assist with special projects as requested by NHS Management.

[JEE Systems Performance Architect](#)
Job ID: R-58507

[Mastercard](#)

O'Fallon, MO

Posted: January 16, 2018

Looking for an advanced JEE Systems Performance Architect/Consultant with extensive experience and willing to take ownership for platform performance from the inception to delivery that will also help support performance for complex financial platforms while in production. This position is for someone with advanced technical knowledge who really likes to dig deep and uncover the smallest detail around performance issues.

Be a part of the central Performance Engineering team at Mastercard. The chosen candidate for this position will be an advanced Systems Performance Architect and someone that is fluent in JEE Software Architecture/Design/development to provide guidance/consultation/testing with respect to engineering Java software for performance to product delivery teams and aligning infrastructure configurations for best overall performance. They will provide guidance and testing services to architects, developers, operations personnel, network personnel, etc. with respect to helping teams design and develop high performing Java applications that operate with a predictable platform design with respect to capacity. This position will help lead performance discipline throughout software development lifecycle to analyze business requirements and customer preferences, and recommend best performance practices in working with various application delivery teams. They will share technical acumen with both DEV, operations and testing resources while they measure, test, and design, inspect, and be ultimately help drive delivery of high performing/high scalable JEE solutions at MasterCard using an agile methodology. This candidate will conduct both manual and automated performance testing, manage performance defects, and troubleshoot performance issues covering platform hardware analysis, scalability, and application profiling (JVM, Databases, etc). They will partner with operations teams and bridge the gap between understanding of software and infrastructure when it comes to knowledge around performance. The candidate will continue to find better and more efficient ways to help MasterCard assure quality and scale its platforms while meeting customer needs. They will continue to drive the Performance Engineering practice.

Specific Responsibilities:

1. Production Performance Analysis and Tuning of JEE products/platforms.
2. Create Performance Test Plans for MasterCard products
3. Perform release and software patch performance testing of Financial JEE Product Suites
4. Perform JEE Code reviews/code profiling to assure code is adhering to best performance practices and assist with performance related problem resolutions.
5. Provide consultation/implementation instructions for tuning software for best performance and make sure the correct performance architecture and software design patterns are being followed.
6. Analyze NoSQL and Oracle/Postgres database related performance issues.
7. Work with both onshore and offshore talent to complete performance related tasks.
8. Adhere to and enforce consistent company and department testing standards and procedures.
9. Provide weekly status information regarding progress and provide presentations to stakeholders. Must have good communication skills.
10. Work across many problem domains to help with performance related issues as assigned.
11. Tune Apache, WebSeals, JBoss/WebSphere application and Linux/Aix servers for best performance.
12. Understand Network latencies, geolocation and bandwidth dependencies

around performance, caching and both front and backend optimization techniques.

13. Experience with Splunk, Dynatrace, LoadRunner or JMeter (or other load generation tool).

14. Good understanding of load balancing, expiration headers, compression, CDNs, etc.

15. Good understanding of TCP/IP sockets, TCP Slowstart/congestion..

16. Have good understanding of JEE performance design patterns and anti-patterns.

About You

- Position requires a Master's degree, or foreign equivalent, in Computer Science, Information Technology, IS or related. Alternatively, employer will accept a Bachelor's degree, or foreign equivalent.

- Qualifying experience must include experience with each of the following: Apache; WebSeals; Testing performance with network latency, bandwidth, geolocations, expiration headers, load balancer and CDN; Optimizing performance using caching/compression techniques; Splunk, Dynatrace, LoadRunner or JMeter; TCP/IP sockets; congestion; utilizing JEE design patterns.

[IS Programmer](#)

[Hastings Manufacturing Co](#)

Hastings, MI

Job ID:

Posted: February 5, 2018

The information below is intended to describe the general content of and requirement for the performance of this job. It is not to be construed as an exhaustive statement of the essential functions.

Position Summary (Mission): 1. The Programmer is primarily responsible for enhancements and upgrades to the Friedman Software System which provides ERP transaction and reporting capability to the Company. As such, the programmer will assist the programming efforts of the IT Director and Sr Programmer using RPG and RPG embedded SQL to maintain the smooth and seamless operation of what has become a legacy system from the Friedman installed software.

Essential Functions and Responsibilities: (Duties include but are not limited to)

1. Develops application software using approved programming languages.
2. Implements approved changes to application software to maintain current standards, correct problems, modify or enhance applications function.
3. Participates in the design and selection of application software to develop skills and knowledge.
4. Adheres to department policies, procedures and standards in the development and implementation of software.
5. Participates in the definition of functional and technical requirements for application software to develop skills and knowledge.
6. Modifies acquired application software using tables, profiles and other vendor supplied customization tools to reflect approved changes specified by the users.
7. Prepares application software procedures and documentation for usage, operation, backup and recovery, problem resolution, shutdown and initialization, and process automation in cooperation with technical support and operations staff.
8. Documents new programs or changes to existing programs.
9. Analyzes reasons for failure and revises assigned programs and/or procedures as necessary.
10. Prepares change control documentation.
11. Prepares audit and internal control procedures.
12. Tests application software to assure accuracy, integrity, interoperability and completeness to achieve desired results of the end user.
13. Trains user and operations staff and validates ability to use and run applications.
14. Documents testing and training results.
15. Establish an environment and culture that promotes safety in the workplace.
16. Work with peers, superiors and subordinates to insure the development and execution of the department/operating plan.
17. Other duties as assigned.

Education, Skills & Experience Required:

1. We expect all team members to exhibit our guiding principles – Respect, Dedication, Integrity, Teamwork and Positivity.
2. Bachelor's degree in IS related field with MRP experience and training
3. Minimum of 5 years of progressive experience in RPG/Imbedded SQL in a manufacturing environment.
4. Proficiency in RPG, RPG embedded SQL programming and fourth generation database query tool experience
5. Some experience with an ERP software solution, either through implementation or significant upgrades to an existing system.

6. Proficiency in AS-400/Power 8.
7. IBM Power 8 hardware experience with distributed wireless connectivity in a LAN/WAN environment is necessary.
8. Excellent verbal and written communication skills.
9. Proficiency in MS Office including Word, Excel, Power Point and Outlook.

Work Environment

The programmer job operates mainly in an office setting. This role routinely uses standard office equipment such as computers, phones, photocopiers, filing cabinets and fax machines.

Physical Demands

This is a largely sedentary role; however, some filing is required. This position is performed within a production facility and may require interaction with employees in the production area. This position would require the ability to lift files, open filing cabinets and bend or stand on a stool as necessary. Individuals may need to sit or stand as needed. This position may require walking primarily on a level surface for periods of time as well as reaching above shoulder heights or below the waist or lifting as required to file documents or store materials throughout the workday. Proper lifting techniques are required. This position may occasionally lift up to 25 pounds for files and computer printouts.

[Field Information Services Specialist](#)

[Envision Healthcare](#)

Birmingham, AL

Job ID:

Posted: March 1, 2018

A Field Information Service Specialist works independently and is responsible for consulting with business leaders within their assigned operating division to plan, design, install, configure and maintain technology solutions that support the local business needs. Serves as the sole local “go to” person for all technology needs and is available to key business leaders and users on a 24 hour/day 7 day/week basis to support mission critical systems. Independently uses system analytical techniques and procedures, including consulting with users, to determine all aspects of system functional specifications.

ESSENTIAL DUTIES AND RESPONSIBILITIES:

- Provide tier-two level support for all of the technology that is deployed within their area of responsibility.
- Monitors and tunes systems to achieve optimum performance levels. Responsible for ensuring data integrity by evaluating, implementing, programming and/or managing appropriate software and hardware solutions.
- Responsible for designing and implementing data/media recoverability processes by implementing a schedule for system backups and database archive operations.
- Develops and maintains a comprehensive operating system hardware and software configuration database/library of all supporting documentation.
- Administration and support of Internet Information Server (IIS), Microsoft Exchange Server, Active Directory/LDAP, Domain Controllers, SQL Server and information security systems in a distributed environment.
- Administration and support of system security, including system access, virus management and security patch management.
- Implementation of software upgrades, including firmware revisions, operating systems, production software upgrades and other enhancements as required.
- Respond to requests for technical assistance remaining on-call evenings and weekends for emergencies. Varied working hours may be required to accomplish technical solutions.
- Coordinate and conduct end user training sessions as needed.
- Work closely with corporate IT and operations management as well as the market AHAH agency, and field staff to provide overall system support as required for proper system operation.
- Installation, configuration and deployment of desktop computers, laptop computers, printers, modems, phones and other computing and telecommunication devices at market headquarters and remote operations centers.
- Installation and configuration of operating system and application software, upgrades and patches.
- General technical support of PC software products (word processing, spreadsheets, email, graphics products, communications software, etc.).
- Troubleshoot and resolve desktop and laptop computer problems and application software issues.
- Responsible for documentation and maintenance of asset inventories.
- Perform cabling connections and organize wire closet activities as needed.
- Assist with operational duties in company computer and communications facilities.
- Coordinate and schedule vendor support, maintenance and repairs.
- Assigned to specific system support as skills and training allow such as deVero.
- Function as a team member within the AHAH IT department as well as local Operations, and the local market to accomplish the goals of the

electronic medical records data system.

- Maintain and produce required reports from Technology Service Request process.
- Assist with procurement process in areas of requisition tracking, receiving, shipping and installation.
- Participate in key committees and attend meetings as required for good coordination of effort and proper communication of system status.
- Document and revise procedures as needed.
- Assist network and telecom groups when on site as necessary.
- Subject to on-call and call-in status (i.e. wear 24-hour beeper).
- Adhere to all company policies and procedures.
- Adherence to and compliance with information systems security is everyone's responsibility. It is the responsibility of every computer user to: Know and follow Information Systems security policies and procedures. Attend Information Systems security training, when offered. Report information systems security problems.
- Some travel required.

Education/Licensing/Certification

- 4-year degree in computer science or related field or equivalent experience required.
- MCSE, MCP and A+ certification preferred.
- Unix (AIX, HP-UX) system administration experience preferred.

Experience:

- Entry level experience in database administration, to include working knowledge of database definition, structure, documentation, operational guidelines and protection.
- Experience in the installation, administration, and support of enterprise systems.

[JAVA Application Server Administrator](#)
Job ID: 2296

Posted: March 15, 2018

[Costco](#) Issaquah, WA

This position is responsible for the support, installation, configuration, and monitoring of Java Application and Web servers. These servers run primarily on Red Hat Linux as well as some IBM AIX hosts. This is not a Developer position.

Tasks and responsibilities

- Provides operational support for WebSphere Application Server, IBM HTTP Server (IHS) and other products supported by the middleware team.
- Delivers project based work to agreed target dates. Notify project manager and engineer of any roadblocks.
- Works with vendors, business and application development teams, and other technical teams to meet the needs of the project.
- Installation, configuration and monitoring of all application and web servers.
- Participates in rotating on-call support 24x7 and be available to work weekends and/or holidays, as necessary.
- Works with Engineers to implement and support project's infrastructure design.
- Monitors load tests, perform deploys, review logs, and various other tasks maintaining the middleware portfolio.
- Seeks opportunities to learn, automate, document, share, educate, and improve processes where appropriate.
- Follows corporate security standards and best practices, including the promotion of awareness on current threats.
- Understand and adhere to Costco's project methodology and framework.
- Understand and adhere to Costco's Mission Statement and Code of Ethics.
- Assists in other areas of the department and company as necessary.

Required skills, abilities, and certifications

- Team player – friendly, communicative, open, honest, thoughtful and committed. Must work cooperatively with others, sharing ideas and collaborating and ultimately putting team goals first.
- Minimum of two years experience supporting products running on AIX or Linux servers.
- Minimum of one year shell and/or Jython scripting.
- Minimum of one year supporting production java application server environments, preferably IBM WebSphere or Liberty but will accept WebLogic, JBoss, Tomcat, Oracle AppServer, or iPlanet experience.
- Must be proficient with OS utilities such as vi, top/topas, crontab, nslookup, ifconfig, and ssh to troubleshoot issues.
- Fundamental networking knowledge

Recommended skills, abilities, and certifications

- Unix administration or certification
- IBM WebSphere Application Server certification
- WebSphere Commerce Server experience
- LDAP/Oracle/DB2/MQ integration
- Container & Cloud Technologies
- Experience with monitoring tools
- SSL/SSO experience
- Jython, JACL, and/or PERL scripting

[Unix System Administrator](#)
Job ID: 2018-0044

[Sumitomo Mitsui Banking Corporation](#)

Jersey City, NJ

Posted: March 15, 2018

The UNIX Systems Administrator is part of the Enterprise Systems group within JRI-A. This role is responsible for the installation maintenance and tuning of HPUX, Solaris, AIX and Linux hardware and software systems and provides technical analysis and design support for applications running on the UNIX and Linux platforms. The individual manages project and task deliverable commitments, system changes and upgrades, as well as performs system debugging tasks.

Responsibilities

- 1 Provides end users, developers and Operations with support including off shift and on call support.
- 2 Plans, prepares and applies maintenance fixes to system software and firmware as required.
- 3 Prepares, installs and implements operating software and associated components.
- 4 Debugs and solves problems associated with Unix and Linux servers in production and test environments.
- 5 Maintains Unix disaster recovery plan and actively participates in technology and business recovery activities including travelling to recovery site for hardware maintenance.
- 6 Tests and implements hardware and software upgrades and if necessary works off shift to implement changes with minimal downtime.
- 7 Assists in evaluating and testing new hardware and software.
- 8 Develops and maintains scripts to automate tasks and deployment.
- 9 Develops test plans for implementing new software or new releases of software.
- 10 Tunes system software for peak performance and availability.
- 11 Works closely with architecture, engineering and security to implement new products and upgrade existing infrastructure.
- 12 Provides technical training for information technology personnel as needed.
- 13 Stays abreast with technical and operational tools and knowledge required to perform assigned duties
- 14 Perform system and application backup and restores based on documented procedures.

Experience/Knowledge Requirements

- 1 Thorough knowledge and experience in all facets of Unix and Linux systems administration.
- 2 Advanced knowledge of networking concepts, TCP/IP, routing, firewalls and network security.
- 3 Strong ability to document and create training material.
- 4 Strong organizational skills with ability to set priorities and manage multiple projects.
- 5 Excellent communication skills with the ability to delegate and influence others.
- 6 Results oriented, exhibits excellent judgment, and has relentlessly high standards.
- 7 High degree of initiative and sense of urgency, flexibility, adaptability and comfort with ambiguity as needs change on a regular basis.

Required Skills/Abilities

1. Proficiency in HPUX and Solaris Systems Administration.
2. Solid understanding of HP Integrity and SUN SPARC hardware architecture.
3. Strong shell scripting and some experience with Perl scripting.
4. Effective communication skills and ability to exercise proper judgement.

[Chase](#)

Columbus, OH

As a member of our Infrastructure Development team, you'll immediately put your love of technology into action. Each day, you and your team will be responsible for making sure our platforms, servers and networks are online and secure. You'll work together, evaluating, selecting, implementing, integrating, maintaining, upgrading, documenting and designing our infrastructure. You'll find new and creative solutions to troubleshoot and resolve issues. Communication is key, both in problem solving with your supervisors and collaborating with your coworkers, as well as other teams in the network.

This role requires a wide variety of strengths and capabilities, including:

- BS/BA degree or equivalent experience
- Ability to articulate and share clear, concise complex technical findings to management in understandable terms
- Maintains proficiency in these key areas:
 - Hardware Architecture (performance testing, monitoring, operations)
 - Hardware Benchmarking (Agile, program managements, network management)
 - Design (compliance, security)
 - Network Engineering (planning, provision)
- Proficiency in more than one specific infrastructure technology
- Ability to execute with understanding of best practices and JPMC policies top of mind
- Ability to collaborate with high-performing teams and individuals throughout the firm to accomplish common goals
- Strong knowledge of infrastructure/environment components (RedHat/AIX, Web server, middleware, policy servers, monitoring, environmental properties) and the integration into application architecture.
- Experience with configuration management (i.e., release management, inventory management, migration, version control, change control, etc.)
- Strong code analysis skills (scripting language experience with automating tasks and troubleshooting interconnected components)
- Ability to quickly learn applications and use that information while troubleshooting

[Watson Health – Technical Specialist](#)
Job ID: 141215BR

[IBM](#) Greenwood Village, CO

Posted: April 10, 2018

The ideal candidate will leverage their existing experience and appetite for learning new things to deploy and support applications that are utilized by our internal and external clients. These applications (50+ of them) run across servers and support our organization's mission of reducing the cost and increasing the quality of healthcare.

A successful individual will perform optimal middleware application configuration and administration, liaise with product engineering teams to ensure best practices, and partner with Technology groups to ensure stable and consistent OS and hardware availability. This individual will also support and/or drive project work and analysis that will include the implementation of best practices across various operating system environments supporting many proprietary and commercial middleware applications.

Essential Responsibilities:

- Resolve/triage escalated issues facing clients or internal employees
- Work with engineering to deploy and test new application versions
- Create, implement, and maintain appropriate monitoring

Required Professional and Technical Expertise:

- Excellent knowledge of Linux/windows environment and administration
- Configuring, deploying, and troubleshooting on various middleware technologies
- Deploying the applications using Continuous Integration tools and manual deployment
- Experience on vulnerability patching and fixes

Preferred Professional and Technical Expertise:

- Linux / AIX / SunOS / Windows
- IBM Http Server / Apache Httpd / IIS
- Cognos / Tableau Administration
- IBM Websphere / IBM Portal / Cognos / Tomcat
- Jenkins / Docker / monitoring tools (Orion/Zabbix)
- Bash / Perl Scripting
- Hands on experience on analyzing Web and App server's logs
- Experience on performance tuning on Server / Java Memory

Required Technical and Professional Expertise

- Excellent knowledge of Linux/windows environment and administration
- Configuring, deploying, and troubleshooting on various middleware technologies
- Deploying the applications using Continuous Integration tools and manual deployment
- Experience on vulnerability patching and fixes
- Associate's degree or equivalent years of experience.

Preferred Technical and Professional Experience

- Linux / AIX / SunOS / Windows
- IBM Http Server / Apache Httpd / IIS
- Cognos / Tableau Administration
- IBM Websphere / IBM Portal / Cognos / Tomcat
- Jenkins / Docker / monitoring tools (Orion/Zabbix)
- Bash / Perl Scripting
- Hands on experience on analyzing Web and App server's logs
- Experience on performance tuning on Server / Java Memory
- Bachelor's degree or equivalent years of experience

[Test Engineer/System Integration Air Traffic Control](#)

Job ID: 652141

Posted: April 10, 2018

[Leidos](#)

Atlantic City, NJ

Leidos is seeking a Test Engineer / System Integration who will be a member of a dynamic team working on Federal Aviation Administration's ERAM technology, which is the heart of the Next Generation Air Transportation System and the pulse of the National Airspace System helping to advance our transition from a ground-based system of air traffic control to a satellite-based system of air traffic management. ERAM is vital to the future of air navigation, providing the foundational platform required for FAA to enable NextGen solutions, via modernization programs such as System Wide Information Management, Data Communications, and Automatic Dependent Surveillance-Broadcast. ERAM will provide benefits for users and the flying public by increasing air traffic flow

Responsibilities:

Working both as a member of a team and independently the successful candidate will be:

- Modernizing the air traffic control tower equipment by improving the exchange of electronic flight data and implementing electronic flight strips. Development of CR Verification test plans/procedures
- Development/test/validation of test scenarios
- Test Execution in the Lab and Virtual Test Lab (VTL)
- Data analysis necessary to verify test results and PR fixes
- Identify software and system issues working across the various system functions and threads
- Deliver high quality work products on or ahead of schedule.
- Follow all documented test processes.
- Meet or exceed all individual and team objectives/milestones.
- Use the most efficient methods to deliver a product, following test processes.
- Maintain a team oriented and positive attitude.

Qualifications:

- Typically requires a Bachelor's of Science degree in a related discipline such as Electrical Engineering or Aeronautical Engineering with 2-4 years of professional experience; or less than 2 years of professional experience with a related Master's degree.
- Excellent communication and interpersonal skills
- Demonstrated technical integration skills in prior work performed
- Understanding of Linux, AIX or other UNIX type operating system
- Test or similar technical experience working with complex systems
- Demonstrated success working in a team oriented environment
- Ability to work in a group or independently to ensure team goals are met
- Ability to perform in a fast paced environment
- Additionally, the following skills(s) experiences are preferred:
- ERAM/Data-Comm Project experience
- Knowledge of deploying of Air Traffic Control Systems
- Knowledge and understanding of how to test complex systems
- Experience preparing test plans & procedures
- Experience in lab test execution
- AT Simulation experience
- Problem Determination / Data Analysis
- FAA Air Traffic Domain knowledge
